*** Vision Screen Protector / Filter Measurement Instruction:**

1. We recommend that you measure the screen/ monitor diagonally, from left top corner to right bottom corner (display screen only) which will identify the ACTUAL size (inch) of display screen.
2. Measure the screen/ monitor/ TV (with the frame/ border if required) and refer to the above product specification. For some models, required protector / filter size is not necessarily the same as your device's size. The display area may need to be included in your consideration of filter size. Please refer to <http://fiara.com.au/faqs/> for more details before order placed.
3. The protection is designed to fit to its desired display screen size, most important is to cover display screen only not entire display screen with frame.
